

## **Ben Goheen**

Ben graduated in 2015 from Michigan State University, where he studied in different labs, across various biological disciplines, before receiving a Bachelor's degree in Neuroscience specializing in cellular and molecular neuroscience. Before joining CCRM, Ben was a Research Assistant at Michigan State University, where he compared gene expression across mammalian pre-implantation embryos at different stages, collaborated with the Harvard Stem Cell Institute and the California National Primate Research Center at UC Davis assessing CRISPR-Cas9 efficacy and specificity in developing monkey embryos, and used mitochondrial replacement/nuclear transfer methods to examine the heritability of metabolic disorders in mice. In his free time, Ben can be found hiking, mountain biking, or otherwise frolicking in the mountains near his home in the Denver Metro area.
