

Shaihla Khan

I am a Post-Doctoral research fellow in Dr. Rebecca Krisher's laboratory at CCRM. I am interested in investigating cell signaling mechanisms involved in oocyte and embryo metabolism. I graduated from the University of Wyoming with a Ph.D. in reproductive physiology where I used my molecular biology skills to research cell signaling mechanisms involved in GnRH induced gonadotropin synthesis and secretion in gonadotrope cells. I have completed my MS in Neuroscience from the University of Wyoming. My MS research focused on developing combinatorial drug assays to facilitate clearance of prion infection in neurons. I have completed another MS degree and BS in Biotechnology from Sheffield Hallam University, UK and Mumbai University, India; respectively. Apart from my research interests, I love playing board games and am a lifelong Star Trek fan!
