

Caitlen Stobbe, BSc – Research Embryologist

Caitlen graduated from the University of Colorado—Denver in 2020 with a Bachelor of Science in Biology. During her bachelor's program, she spent a semester studying abroad where she worked with refugee women and their children to help integrate into their new lives. After completing her degree, she jumped into laboratory work at a nonprofit organization. There she played an integral role in the processing of blood donations, performing leukocyte reductions, and other vital quality control testing. She has been able to combine her love of science and helping people at CCRM as a research embryologist. Her current research at CCRM includes supplementation studies to improve aged fertility outcomes, as well as aging male gamete studies. In her free time, Caitlen can be found doing everything from baking intricate desserts, to hiking, to shooting a rack of pool.
